/William C. Vaughn, Jr./ Supervisory Patent Examiner, Art Unit 2444			

Continuation of 11. does NOT place the application in condition for allowance because: Applicant argues that none of the cited references teach or suggest selecting selecting one of a DBM-based method and TCP/IP-based method, wherein said MS communicates said location information of said MS with said PDE via data brust messages in said DBM-based method, wherein said MS communicates said location information of said PDE via a TCP/P network in said TCP/IP-based method as claimed in claim 1 and similarily in claim 16. Examiner disagree with Applicant's argument for at least given reason: Meadow-Lim discloses selecting one of a DBM-based method and a TCP/IPbased method, wherein said MS communicates said location information of said MS with said PDE via data burst messages in said DBMbased method, wherein said MS communicates said location information of said MS with said PDE via a TCP/IP network in said TCP/IPbased [see Meadow: col. 2, lines 1-15, col. 4, lines 18-39 and Lim: col. 3; detail description of the preferred embodiments; figures 1-2: lines 25-35, 45-66; data exchange by short message peer to peer protocol (SMPP) based on TCP/IP and between the CLC and SMSC; col. 3. lines 32-35, 45-49, TCP/IP and Data Burst msgs etc.]. Likewise Sheynblat discloses selecting one of a DBM-based method and a TCP/IP-based method, wherein said MS communicates said location information of said MS with said PDE via data burst messages in said DBM-based method, wherein said MS communicates said location information of said MS with said PDE via a TCP/IP network in said TCP/IP-based [see Sheynblat: abstract, figures 2A-B, 3, 7-10 and the details related to figures, col. 4, line 32-col. 5, line 23; location-based information (i.e., information specific to a client's location or a location of interest to the client) to a client, which may be a mobile SPS receiver, via the Internet and in particular, the World-Wide Web; a system for exchanging location-based information via a computer network, such as the Internet, according to one embodiment of the invention. A system 400 is shown, in which a location-based information Web server 404 is part of the Internet 402. The Internet generally represents a network of networks, and may include various types of data communication media (wires, wireless, cellular, etc.), switching devices, routing devices, network computers/servers, client computer systems, local area networks (LANs), wide area networks (WANs), etc. Such networks may use a variety of protocols to regulate the exchange of information, such as TCP/IP, ATM, etc. Internet access is typically granted to client computer systems by Internet service providers (ISPs). Access to the Internet may facilitate transfer of various types of information (e.g., email, data files, programs, media, etc.) between two or more digital processing systems, see detailed in figure 9]. Thus it is Examiner's position that the combination of Meadow-Lim-Shevnblat discloses the invention as claimed in claims 1, 16 and all their dependent claims.
